

# CSCE 5320 Scientific Data Visualization

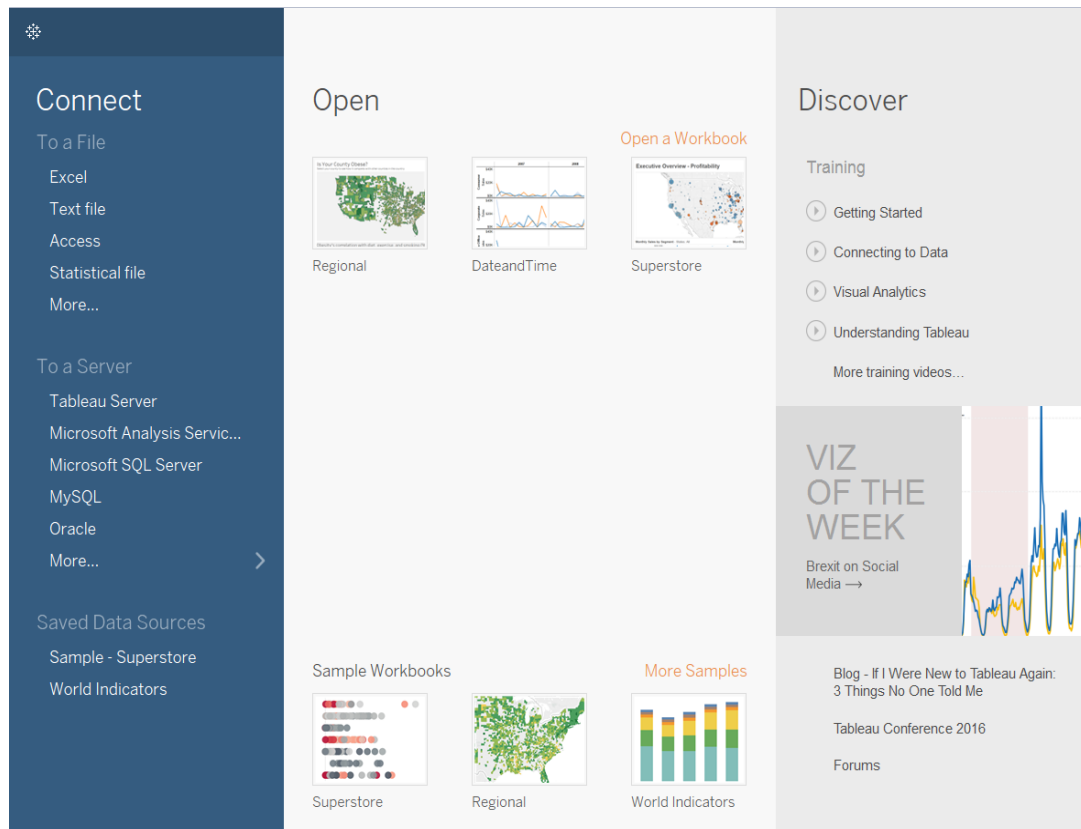

## Introduction to Tableau

### Tutorial

#### 1. Download Tableau

<https://www.tableau.com/products/trial>

#### 2. Open Tableau

The start page gives you several options to choose from:

**Tableau icon.** Click  in the upper left corner of any page to toggle between the start page and the authoring workspace.

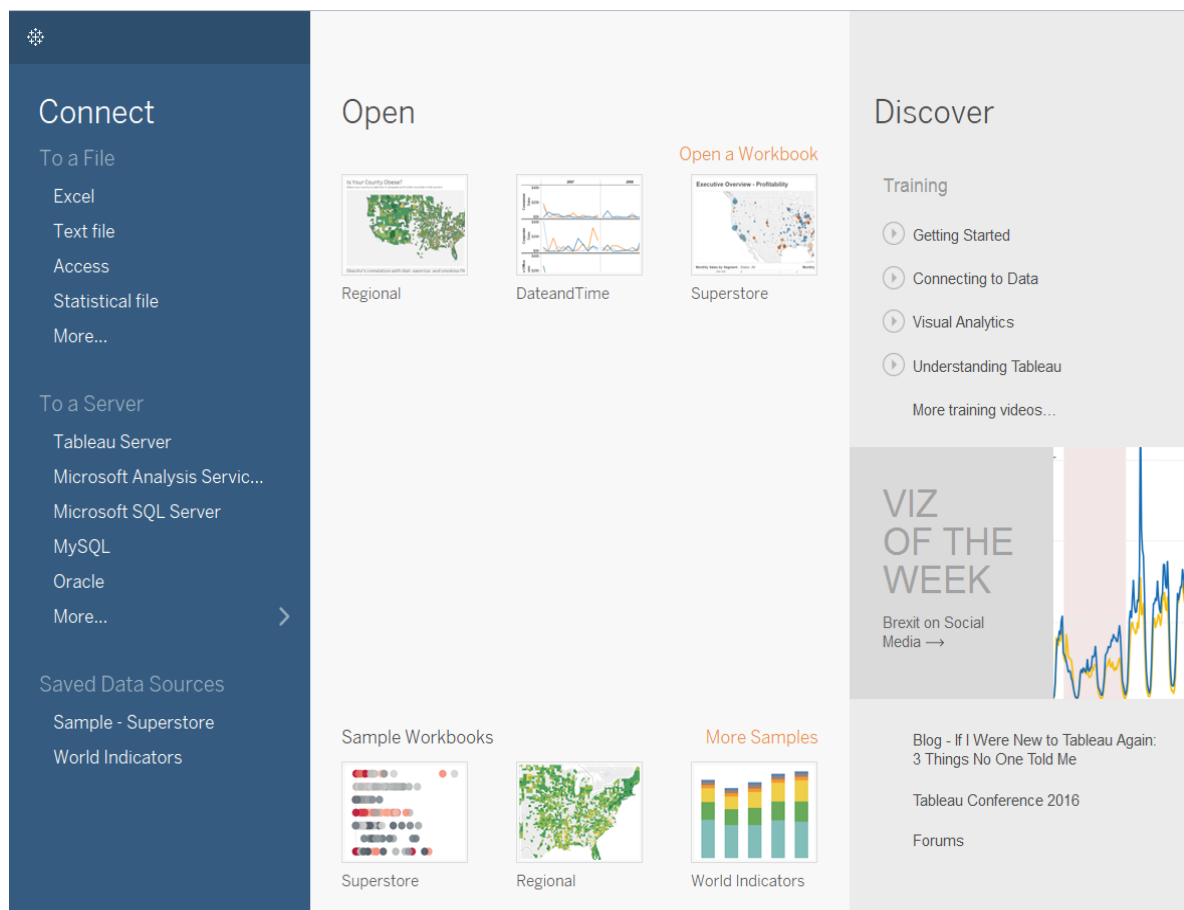

**Connect pane.** Under **Connect**, you can:

- Connect to data that is stored in a file, such as Microsoft Excel, PDF, Spatial files, and more.
- Connect to data that is stored on Tableau Server, Microsoft SQL Server, Google Analytics, or another server.
- Connect to a data source that you've connected to before.

Tableau supports the ability to connect to a wide variety of data stored in a wide variety of places. The **Connect** pane lists the most common places that you might want to connect to.

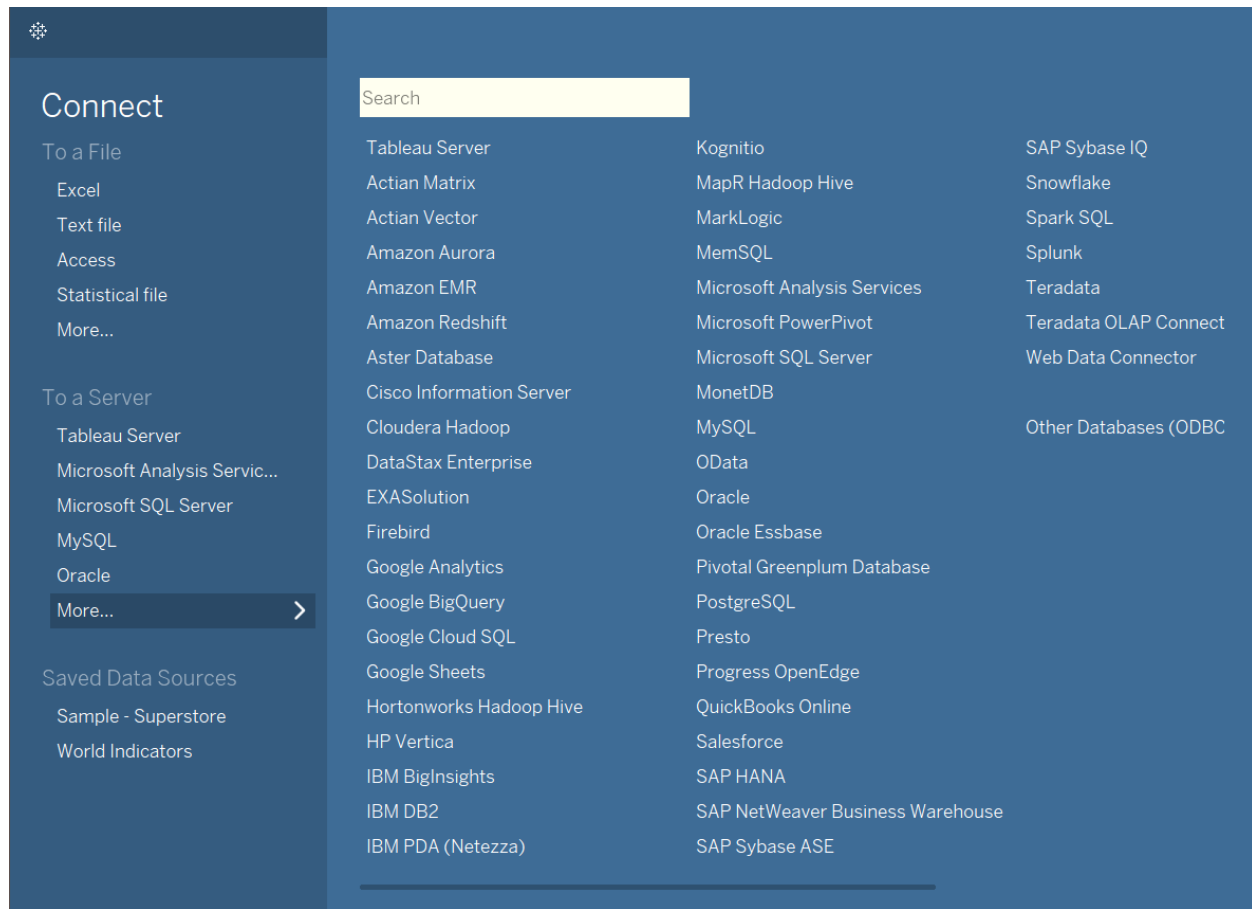

3. Under **Sample Workbooks**, view sample dashboards and worksheets that come with Tableau Desktop.

4. Under **Open**, you can open workbooks that you've already created.

## Build a Basic View to Explore Your Data

### Connect to your data

The first step is to connect to the data you want to explore.

- Open Tableau. On the start page, under **Connect**, click Microsoft Excel. In the Open dialog box, navigate to the Excel file on your computer.
- After you connect to the Excel data, the *data source page* shows the sheets or tables in your data. Drag the "Orders" table to the *canvas* to start exploring that data.
